# ICS online

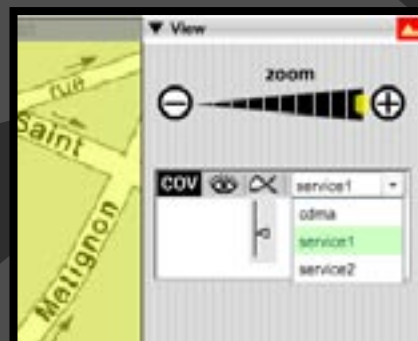

ICS online is a powerful and yet simple internet / intranet application allowing you to easily access your radiocommunication network data. It is a link between the network design team and the marketing department, the sales force, the customer center and the installation and maintenance services.

- > *Where should we market the service?*
- > *Can a particular prospective customer be connected?*
- > *Can I subscribe to your service?*
- > *What are the installation instructions for this new customer?*
- > *I cannot use the service today, is there a problem with your network?*

ICS online is offered in several configurations:

- ICS online «generic»
- ICS online «network manager»
- ICS online «geomarketing»

## Main features

- ☉ Complete map functionalities: Drag & drop Pan, Zoom in / out, change map scale, display of coordinates.
- ☉ Coverage display for each service.
- ☉ Address query based on street number, street name, city, province... (handles misspellings).
- ☉ Display of signal quality. Handles various kinds of coverages (field strength, best server, C/I, Ec/Io, Eb/No...). Customized comments on the signal quality.
- ☉ Animated base stations display including status of transmitters (normal, planned, removed, out of order...).
- ☉ Easy printable reports including map extract, coverage details...
